

SUPER SYSTEM 4 DEVELOPING TANKS

Product Codes, Single Tank PTP114, Universal, PTP115

The Super System is simple to load, faster to fill and easier to clean than any other tank. It has a large diameter one piece lid and funnel which clips into place positively and securely, enabling the tank to be filled and emptied quickly.

The 35mm Tank (PTP114) takes a single 35mm film, the Universal tank (PTP115) takes two 35mm films or a single 120/220 film. The 35mm model is complete with one auto load reel and the Universal tank is complete with two auto load reels.

In-use:

Agitation of the processing solutions can be by inversion of the tank using the flexible water tight cap provided, or by rotary agitation using the agitation rod also provided.

In processing 300 ml of solution is required for a single 35mm film or 500ml for two 35mm and one 120 roll film.

It is essential that in use, the auto load reels are always used fixed onto the centre column provided. This ensures that the tank remains light tight during the processing cycle.
