

SUPER SYSTEM 4 MULTI-REEL DEVELOPING TANKS

These tanks are supplied without reels so that a system best suited to the users needs can be built up.

The Multi -reel 3: Takes up to three 35mm films, or two 120/220 films. (Code PTP116)

The Multi -reel 5: Takes up to five 35mm films or 3 120/220 films. (Code PTP117)

The Multi- reel 8: Takes up to eight 35mm films or five 120/220 films. (Code PTP118)

The Paterson Auto-Load reels are slid onto the appropriate centre column supplied with the tank. The reels are designed to grip the centre column and any number from one reel up to the tank maximum can be used. Care should be taken when inverse agitation is used with less than a full load of film and chemistry, as it can lead to over vigorous agitation of the chemistry.
